

Premier Sample Library (PSL)

provides the most comprehensive collection of samples from the Permian Basin, allowing our clients the ability to optimize well location, well spacing, and placement of stages.

OVER 70 MILLION SAMPLES FROM NORTH AMERICAN WELLS...

both onshore as well as offshore, the PSL is the largest commercial repository of core cuttings and samples of its kind.

MORE THAN 150,000 WELLS FROM THE PERMIAN BASIN...

the PSL features samples from Texas covering almost every county with specific focus on West Texas....and boasts thousands of other wells in New Mexico and Oklahoma.

30,000 SQUARE FEET OF SAMPLE STORAGE SPACE...

supporting regional chemostratigraphic studies developed using Premier's advanced XRF and XRD workflows and measurements. This data and information are being integrated with other well and reservoir information to deliver to the industry high resolution studies to help our clients make better decisions on each and every well.
